

Clean air in your **home.** Every season.

Fresh, filtered air through every room. All year.

BEFORE

~~AQI 180–260~~

AFTER

AQI 10–15

Indoor readings taken at installs across Delhi NCR — with windows and doors to the outside closed, filters changed on time, up to 2,000 sq ft carpet per system and the kitchen exhaust running while cooking.

The name is the promise: **AQI Zero**, indoors.

Why clean air **matters.**

EVERY DAY

11,000
litres of air

Each of us breathes about this much — most of it at home.

CHILDREN

Small lungs, still growing.

Children breathe faster than adults and take in more air for their size. Their lungs keep developing into their teens.

ELDERS

Most at risk, too.

Older parents — especially with heart or lung conditions — are among the most affected.

TOLERANCE

You don't get used to it.

Feeling used to the air isn't the same as being protected from it. There's no training dose: with pollution, less is better. Period.

RECOVERY TIME

Home is where you recover.

Most of your hours — and your nights — are at home. Clean air there is a daily break from pollution: a place to breathe and recover.

How is aqi0 different?

aqi0 — whole-home air purifier	Single-room recirculating air purifier
● Every room, from one system	● Cleans one closed room
● Filtered outdoor air in — stale air and CO ₂ out	● Recirculates the same air — CO ₂ builds up
● Outside windows shut; inside doors open	● Doors and windows shut, room by room
● Gentle positive pressure — air leaks out, not in	● Dust keeps seeping in through gaps
● One system, one set of filters	● One unit and one set of filters per room

One quiet system. The whole home.

1

Draw & filter

Outdoor air drawn in through three H13 HEPA panels.

2

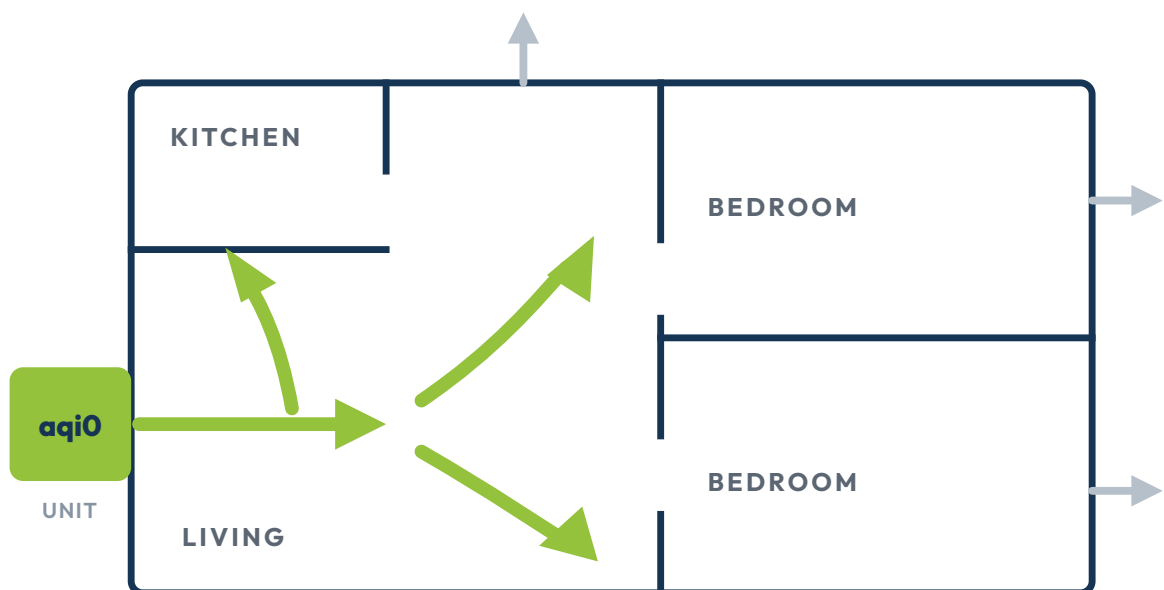

Pressurise

The home is gently pressurised. Stale air and CO₂ pushed out.

3

Every room

Clean air everywhere, day and night. Windows stay shut.

STALE AIR OUT, THROUGH NATURAL GAPS

One system covers up to 2,000 sq ft carpet — a typical 2–4 BHK.

Beyond that, or across more than one floor, we specify two.

Always ask what's inside. We'll tell you ours.

FAN

Quiet EC fan

Electronically commutated. ~500 m³/h effective in service (~700 m³/h rated). ~30 W.

Long life, and
warranted

FILTER

Three H13 HEPA panels

One replaced at each visit, on rotation — about **2 m² of pleated media in each**, twenty times its face area. Japanese media. Captures 99.95% or more of particles at 0.3 micron.

Clean air, in every room

PRE-FILTER

Washable

Clean it every 7–10 days: vacuum it or rinse it, and refit it once dry. A two-minute job.

Your HEPA lasts its full
life

BODY

High-grade sheet metal

Powder-coated, built for outdoor installation. Designed, assembled and tested in Gurugram.

Made in India

This is our true pricing. Nothing hidden.

INDIVIDUAL PRODUCTS — THESE ARE THE PRICES

Core machine

₹82,600*

Fully installed: the opening, ducting, diffuser, wall bracket or floor stand, wiring and weather sealing. Three H13 HEPA panels and a washable pre-filter.

Care plan, 365 days

₹14,750*

Every scheduled visit: a fresh H13 panel (one of three, on rotation) and a full machine clean, with an on-site AQI reading — about every 45 days through the Oct–Feb peak, longer the rest of the year. Fault visits included. WhatsApp reminder before each due date. Care-plan homes are scheduled first.

aqi0 Monitor

₹4,000*

Real-time AQI in your home, live on the aqi0 app. Available separately.

H13 HEPA filter (without care plan)

₹2,200*

Price is per panel. The machine holds three, replaced one at a time on rotation.

BUNDLE · ONE YEAR OF CARE

~~₹1,01,350~~
₹99,999*

Machine, monitor and a care plan. 75 days are added: 440 days, not 365, to cover the first filters (they last about 50 days).

BUNDLE · TWO YEARS OF CARE

~~₹1,16,100~~
₹1,11,111*

Two care plans plus the same 75 days — 805 days of cover. The care plan for two years together is **16% lower**.

Carbon filter

ADD-ON

Outdoor gases and odours, not just particles. One panel, every six months; outside the care plan.

₹2,200*

aqi0 Dial

ADDITIONAL ATTACHMENT

Wi-Fi enabled remote control, with the app

₹7,500*

*All taxes included. Installation included — a normal glass pane, a core cut or a ply cut. Toughened glass can't be cut on site: we arrange a factory re-cut, quoted separately.

Your care plan price doesn't move.

1

**₹14,750* this year.
₹14,750* next year.**

We don't raise it because you already bought.

2

**Two years together:
16% lower.**

With the system, cover runs 805 days, not 730.

3

**After that, only
inflation.**

Never a jump. The two-year option stays, every renewal.

The plan is optional. H13 filters are on the price list at ₹2,200* per panel and take minutes to change yourself. The plan is the convenient way, not the only way.

Your fan is warranted for as long as the plan runs — up to five years. Let it lapse and the warranty reverts to the standard one year from installation, which you have either way. Within warranty we repair the fan, or replace it with an equivalent one, new or refurbished. The speed controller and electronics carry 3 years; the sheet-metal body is not warranted against outdoor weathering.

aqi0

Other brands

THE PRICE

Published. ₹82,600* installed.

Typically ₹1.5–2 lakh

FILTRATION

**Three H13 panels, 50 mm each —
~6 m² of media in all**

Mostly two HEPA stages, around 60 mm

FAN WARRANTY

Up to 5 years, with the care plan

Typically 1 year

CARE PLAN

₹14,750*, published, held next year

Rarely will confirm the second year's cost

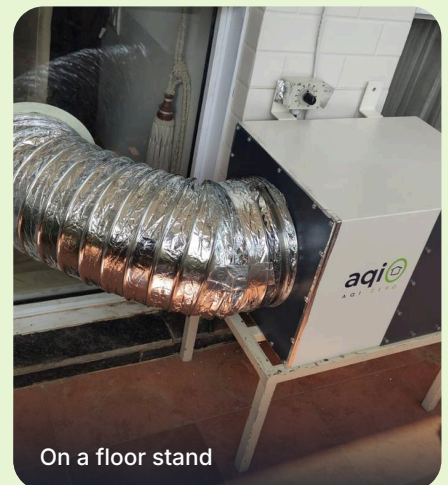

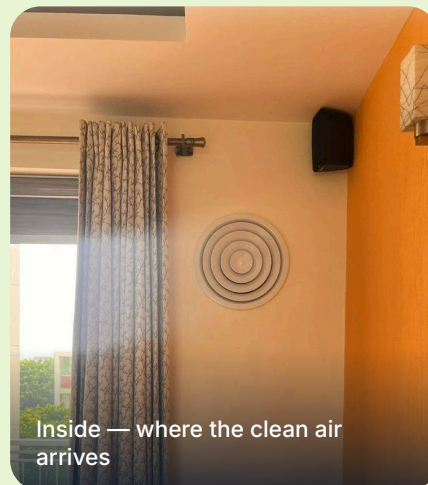

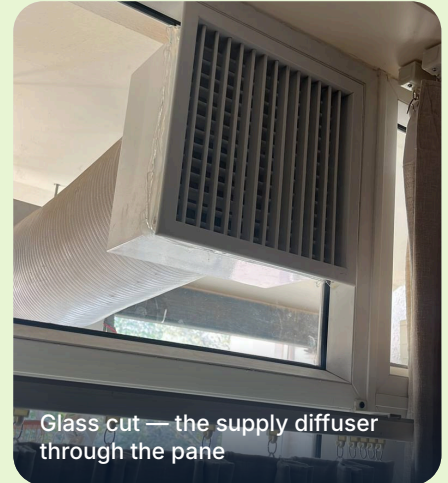

Every product price is on these pages. Ask anyone else for theirs — before you buy, not after.

*All taxes included.

We don't negotiate — the first caller and the hardest arguer pay the same.

aqi0.com

Real homes. Real installs.

THE aqi0 APP

Your monitor, live on your phone.

Every aqi0 Monitor links to the app — the air in your home against the air outside, hour by hour. Add the Dial and you set fan speed from the same screen.

How we install aqi0.

One unit outside. One duct in. A neat round diffuser on your wall. Every photo below is from a real aqi0 install.

1 The unit lives outside

On a balcony, terrace, utility area or ledge. We choose the mount your space allows, close to a power point.

Wall mounted on a terrace

Ceiling hung above an AC outdoor unit

Floor stand where the walls are glass

Bracketed to existing window bars

2 One duct comes in

A single 10-inch duct carries the filtered air indoors, by the neatest route your home already has — kept short, 10 ft at most.

Through a wall with a clean core cut

Through glass above a door

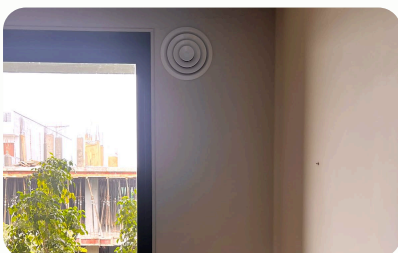

Through a window with a fitted panel

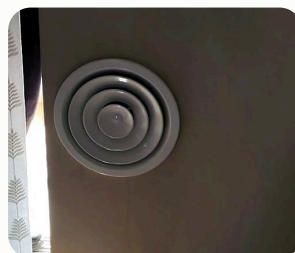

Short and tidy, tucked among the plants

3 Inside, just a diffuser

Filtered outdoor air flows in and keeps your home at a slight positive pressure, so dusty air is pushed out, not drawn in.

Above a balcony door, blends with the wall

Same wall as the core cut, finished

High in a corner, above a framed print

On a glass panel, the unit just outside

GOOD TO KNOW BEFORE INSTALL DAY

Toughened glass. It can't be cut on site — we arrange a factory re-cut, quoted separately.

Rain cover. Where the intake faces open sky, we fit a rain cowl. Quoted separately.

Power point. The unit needs a 6A socket nearby. If there isn't one, we extend it at a small extra cost.

AQI Zero indoors, today. AQI Zero everywhere, someday.

“The day India’s air is clean enough that no home needs our system is the day **aqi0 has won.”**
